UX Requirements & Screen Inventory

VERSION 1.1 | 06 NOVEMBER 2026

400 COFFEE

UX Requirements & Screen Inventory

Dark cinematic design system and end-to-end interface specification

Document status: Professional working draft for stakeholder review. Open decisions and assumptions are explicitly identified.

Contents

1. Approved art direction

2. Global navigation and shell

3. POS screen inventory

4. Kitchen display screen inventory

5. Customer QR screen inventory

6. Owner dashboard screen inventory

7. Interaction and motion rules

8. Responsive and device guidance

9. UX validation plan

1. Approved art direction

Theme Dark Cinematic Café-Tech: near-black espresso foundation, charcoal surfaces, roasted caramel primary accent, warm latte highlights and restrained mint success states.

Motion Cinematic ambient depth, slow floating coffee/steam motifs, subtle parallax and card elevation; purposeful micro-interactions for new tickets, status transitions and confirmations. Respect reduced-motion preferences.

Tone Premium, calm, confident and operational. Avoid neon overload, excessive gradients, ornamental animations and tiny low-contrast labels.

Visual tokens Espresso #211A15; charcoal #29231F; caramel #D89B5C; latte #E9B879; mint #83C69A; cream #F4EBDD. Use neutral shades for most surfaces and colour only for hierarchy/status.

Typography Use a modern sans-serif with tabular numerals for money, timers and order IDs. Clear hierarchy: page title, section label, high-priority metric, operational row.

Accessibility WCAG-informed contrast; visible focus; keyboard navigation where practical; text labels alongside colour; 44px minimum touch target target; scalable type; reduced motion.

2. Global navigation and shell

Staff shell Outlet and shift context, connection/sync indicator, role identity, primary navigation, alerts and quick action. Keep POS and KDS separate by role/device mode.

Owner shell Outlet selector, date range, dashboard/report navigation, exception center, configuration and profile.

Customer shell Outlet identity, menu categories, cart, order progress, clear dine-in/takeaway context, help/contact and privacy notice.

Platform shell Tenant search, plan/status, health, support case and audited support actions.

3. POS screen inventory

POS-01 Sign-in / device Staff authentication, device label, outlet selection, shift start and network state.

POS-02 Order workspace Order type, table/pickup reference, category rail, searchable product grid, item modifiers, cart, subtotal/tax/charges/total, submit action.

POS-03 Item customization Required/optional modifiers, quantity, special instruction, availability and price impact.

POS-04 Order review Server-validated total, order type, item list, notes, customer details if required and confirmation.

POS-05 Payment Cash/UPI selection, exact amount due, static QR instructions, customer-declared status separated from verified status, cashier verification form.

POS-06 Order detail Order timeline, station tickets, payment ledger summary, edit/cancel permissions, bill and status.

POS-07 Shift close Expected vs counted cash, UPI verified collections, refunds, variance reason, close confirmation.

POS-08 Exceptions Unverified UPI declarations, mismatches, duplicates, unpaid ready orders, delayed tickets and sync errors.

4. Kitchen display screen inventory

KDS-01 Station selection Beverage or food station identity, active queue count, connection state and station filter.

KDS-02 Active queue Ticket cards with order number, age/timer, item quantities, modifiers, special instructions and priority/delay cue.

KDS-03 Ticket detail Full ticket content, start/ready controls, item-level status if enabled and escalation notes.

KDS-04 Ready history Recently completed tickets, handoff status and reopen permission for authorized roles.

KDS-05 Reconnect/recovery Explicit offline/reconnecting state; last successful sync; recover queue from server; no silent stale queue.

5. Customer QR screen inventory

QR-01 Outlet/table landing Brand, outlet/table context, dine-in or takeaway choice if permitted, service availability and clear ordering CTA.

QR-02 Menu browse Categories, item images where available, price, dietary/allergen information only when verified, sold-out state and search.

QR-03 Item detail Description, modifiers, quantity, notes, price changes and add-to-cart.

QR-04 Cart/checkout Items, modifiers, quantity, taxes/charges, final server quote, customer contact optionality and submit.

QR-05 Order accepted/held Order reference, clear pending cashier approval or accepted state, estimated timing only if supported.

QR-06 Tracking Preparation status, split station progress where useful, ready/pickup instruction and support path.

QR-07 Error/retry Connectivity issue, expired token, unavailable item, changed price or closed outlet; preserve cart where safe.

6. Owner dashboard screen inventory

OWN-01 Overview Orders, gross order value, confirmed collections, outstanding, refunds, net collections, AOV, payment mix and delayed orders.

OWN-02 Sales Date range, hourly/daily trend, order type, category/product performance and export.

OWN-03 Payments UPI/cash ledger, unverified declarations, mismatches, duplicate references, refunds and reconciliation status.

OWN-04 Operations Station throughput, ticket time, delay distribution, cancellation and peak period.

OWN-05 Menu Product availability, price/category/modifier configuration and station routing.

OWN-06 Team and shifts Staff roles, shift status, cashier totals and variance.

OWN-07 Settings QR policy, outlet hours, taxes/charges, station configuration, receipt settings and devices.

7. Interaction and motion rules

Ambient motion Slow background steam/bean movement only in non-critical regions; pause when tab is inactive and respect prefers-reduced-motion.

Ticket arrival New ticket uses a short slide/fade and one restrained emphasis pulse; sound is optional, configurable and never the only alert.

Status change Use immediate state label, timestamp and subtle transition. Prevent double taps while command is pending; provide retry after recoverable failure.

3D depth Use perspective hover/elevation only on non-critical dashboard cards and desktop pointer contexts. Do not tilt active kitchen tickets or touch targets.

Loading Skeletons for dashboard data; explicit pending state for commands; no indefinite spinner without recovery guidance.

Error language Explain what happened, what is safe to retry and whether an order was accepted. Never say payment succeeded before verified ledger confirmation.

8. Responsive and device guidance

POS Landscape 10–11 inch tablet preferred; persistent cart; large product controls; hardware keyboard optional.

KDS Large tablet/monitor, high contrast, readable from working distance, always-on power, tested Wi-Fi and optional bump-bar/keyboard.

Customer Mobile-first responsive PWA, low-bandwidth menu, minimal data capture, no app install.

Owner Desktop/tablet first with mobile summary and exception review.

Hardware qualification Test actual screen dimensions, brightness, Wi-Fi roaming, thermal behaviour, charging, kiosk mode, printer compatibility and browser sleep policies.

9. UX validation plan

Usability tasks Create takeaway order; create dine-in order; add modifier; accept QR order; identify next station ticket; verify UPI; handle duplicate reference; close shift; recover KDS after Wi-Fi interruption.

Pilot measures Task completion rate, median time, mis-taps, corrections, staff confidence, order accuracy, queue visibility and exception resolution time.

Exit criteria No critical task blocked; users understand payment verification distinction; kitchen can identify and progress tickets without coaching; customer can submit and track an order on common mobile browsers.

VERSION 1.1 — CUSTOMER EXPERIENCE ADDENDUM

Version 1.1 addendum — 06 November 2026. This addendum supersedes any earlier customer-facing UX description that implied a conventional QR menu/dashboard as the primary customer experience. The immersive Virtual Café is the approved customer-side direction. Existing staff POS, KDS, owner and platform-admin interfaces remain separate workstreams and are not redesigned by this customer-side change.

3.1 Approved art direction

Art direction: premium cinematic café, not admin dashboard. Palette: espresso-black/walnut (#120d0a / #241810), warm brass/amber (#d9ad70), parchment/cream (#f1e4cc), roasted-coffee browns and restrained muted olive. Materials: aged leather, dark walnut, brushed brass, warm glass, ceramic and paper. Lighting: amber practicals, soft volumetric shafts, subtle steam and realistic contact shadows. Typography pairs an editorial serif for titles/menu with a highly legible sans-serif for controls, prices and status. Do not use neon cyberpunk gradients, generic SaaS cards, excessive glassmorphism, emoji as final product imagery, or a dashboard-first layout.

3.2 Screens and states

CX-01 Entrance: full café scene, manager, greeting, two actions, skip intro, sound toggle only if sound is added, loading and fallback states. CX-02 Pay bill lookup: bill/order reference, phone verification, outstanding amount retrieval, no arbitrary production amount entry. CX-03 Diary menu: category tabs/page markers, product imagery, descriptions, price, availability, add button, cart count. CX-04 Product detail/customization: product image, variant/size, modifiers, quantity stepper, preparation notes, allergens only from approved data, live total. CX-05 Basket: editable line items, notes, price breakdown, empty state, unavailable item state. CX-06 Customer identity: name, phone, transactional WhatsApp consent, validation. CX-07 Review: fulfilment context, all items and totals, contact, edit/back, final submit. CX-08 Payment choice: pay now/pay at takeaway. CX-09 Payment method: UPI/QR/card/debit only if configured, provider handoff, pending/failure/expired/retry. CX-10 Confirmation: order ref, accepted/awaiting acceptance, payment due/paid, WhatsApp message status, pickup/table instructions. CX-11 Order status: accepted/preparing/ready/completed with refresh/reconnect states.

3.3 Motion and interaction rules

Camera: 1.5–3 second optional entrance dolly/push-in, settle before dialogue. Avoid camera motion during typing, menu selection, checkout or payment. Menu diary transition should feel tactile (page turn/crossfade), remain under 500 ms for routine navigation and be disabled under reduced-motion. Manager gestures are subtle idle/breathing/blink and short greeting gestures; no exaggerated lip-sync or distracting continuous animation. All transitions preserve navigation/back state. Avoid auto-playing sound; if ambient audio is used, require explicit opt-in and visible mute control.

3.4 Mobile-first responsive rules

Design baseline 360×800 and 390×844; tablet 768×1024; desktop 1440×900. Mobile: keep primary action in reachable lower area without covering content; avoid tiny controls; diary becomes a single-page/touch-friendly menu while retaining the diary metaphor. Desktop: scene can use wider cinematic composition. Landscape and small screens must preserve core CTA and manager visibility. Do not force horizontal scrolling. Use safe-area insets for notches and bottom bars.

3.5 Content and interaction microcopy

Manager welcome: “Welcome to 400 Coffee. How can I help you today?” Primary actions: “View menu & place order” and “Pay bill”. Menu intro: “A diary of good things.” Review prompt: “Does everything look right?” Payment prompt: “Would you like to pay now, or at the takeaway counter?” Pay-later confirmation: “Your order has been sent to the café. Payment is due at the takeaway counter.” Payment pending must say “We’re checking your payment” rather than “Paid”. Order waiting acceptance: “Your order has been submitted and is awaiting café acceptance.” All copy must be editable/configurable; do not hardcode localised copy throughout components.

3.6 UI screenshot references

The included UI_Concept_Screenshots are illustrative concept frames, not captures of a deployed application. They establish the intended hierarchy, palette, diary menu and customer journey. Claude must reproduce the interaction and quality direction, not treat the images as exact pixel-perfect assets or substitute static mockups for working screens.

DARK CINEMATIC CAFÉ-TECH | VERSION 1.0 | 06 NOVEMBER 2026
