400 COFFEE

Client Pitch Deck — Presenter Notes

VERSION 1.1 | 06 NOVEMBER 2026

400 COFFEE

Client Pitch Deck

A connected café operating system for faster service and clearer control

Document status: Professional working draft for stakeholder review. Open decisions and assumptions are explicitly identified.

Contents

Slide 1 — 400 Coffee Operations Platform

Slide 2 — The operating challenge

Slide 3 — One connected workflow

Slide 4 — Four experiences

Slide 5 — Trustworthy payments

Slide 6 — Kitchen coordination

Slide 7 — Owner visibility

Slide 8 — Delivery roadmap

Slide 9 — Pilot success measures

Slide 10 — Commercial model & next step

Slide 1 — 400 Coffee Operations Platform

Headline From manual café operations to one connected operating system.

Subhead Cashier POS • Customer QR • Split Kitchen • Owner Intelligence

Talk track A practical platform designed around the actual café floor: fast cashier service, coordinated beverage and food preparation, traceable collections and actionable owner visibility.

Slide 2 — The operating challenge

Headline Every order crosses multiple handoffs.

Points Manual capture creates re-entry and missed details; split stations need coordinated tickets; static UPI payments need human reconciliation; owners need a reliable picture of orders versus money collected.

Talk track The problem is not just billing. It is the end-to-end flow from order capture to preparation, handoff, payment and daily reconciliation.

Slide 3 — One connected workflow

Headline One order. One source of truth. Multiple purpose-built views.

Points Cashier creates or accepts orders; customer scans QR and submits; system routes beverage and food items; kitchen updates progress; payment ledger records verified collections; owner sees reconciled performance.

Talk track Each role gets a focused interface while the backend maintains a consistent order and payment record.

Slide 4 — Four experiences

Headline Designed for every person in the café.

Points POS: fast order entry. Customer QR: mobile guest checkout. KDS: split station queues. Owner dashboard: sales, collections, delays and exceptions.

Talk track The approved visual direction is dark cinematic café-tech, with restrained motion and tablet-first operational screens.

Slide 5 — Trustworthy payments

Headline Payment status must mean money was actually verified.

Points Static UPI QR does not uniquely identify an order. Customer declaration is not proof. Pilot workflow: exact amount and order reference → merchant-side verification → recorded amount/reference/verifier → confirmed ledger.

Talk track We will not claim automatic UPI confirmation until a supported bank/provider integration is available and tested.

Slide 6 — Kitchen coordination

Headline Beverage and food move independently. The order completes together.

Points Station-specific tickets; clear modifiers and timers; start/ready actions; reconnect recovery; parent order ready only when all required station work is complete.

Talk track This prevents a single combined ticket from hiding work across separate preparation stations.

Slide 7 — Owner visibility

Headline Separate sales from collections.

Points Gross order value; confirmed collections; outstanding balances; refunds; net collections; payment mix; average order value; product mix; delayed tickets.

Talk track Metric definitions and payment ledger reconciliation are built into the product, not left to spreadsheet interpretation.

Slide 8 — Delivery roadmap

Headline Prove the core workflow, then expand.

Points Pilot: POS, QR, split KDS, manual UPI verification, shifts and dashboard. Next: SaaS onboarding/security. Later: inventory, recipes, wastage, loyalty, advanced analytics and multi-outlet.

Talk track A modular monolith and PWA-first approach keep the first release focused and maintainable.

Slide 9 — Pilot success measures

Headline Measure operational improvement, not just feature completion.

Points Order accuracy; time to capture and dispatch; kitchen update latency; delayed tickets; payment reconciliation exceptions; shift variance; staff adoption; customer QR completion.

Talk track Capture baseline before pilot and compare after training and stabilization. Do not promise ROI until baseline data is available.

Slide 10 — Commercial model & next step

Headline Fixed-scope pilot plus transparent recurring SaaS.

Points Implementation quote and milestones; separate subscription; optional support; hardware/cloud/provider costs transparently listed; scope changes controlled.

Talk track Confirm legal entities, menu/tax rules, merchant UPI provider, hardware and pilot acceptance criteria, then finalize a binding proposal.

VERSION 1.1 — CUSTOMER EXPERIENCE ADDENDUM

Version 1.1 addendum — 06 November 2026. This addendum supersedes any earlier customer-facing UX description that implied a conventional QR menu/dashboard as the primary customer experience. The immersive Virtual Café is the approved customer-side direction. Existing staff POS, KDS, owner and platform-admin interfaces remain separate workstreams and are not redesigned by this customer-side change.

Client-facing presentation update

The revised client pitch deck is supplied as an editable PPTX and PDF. It is designed to be shared externally and includes concept UI screenshots labelled as illustrative. It presents the immersive customer journey, operations handoff, payment truth, integrations, scope, delivery approach, assumptions and next steps. The screenshots are concept mockups, not deployed-product evidence. Do not remove that disclosure until genuine product captures are available.

DARK CINEMATIC CAFÉ-TECH | VERSION 1.0 | 06 NOVEMBER 2026
