Client Pitch Deck — Presenter Notes

VERSION 1.1 | 06 NOVEMBER 2026

400 COFFEE

Client Pitch Deck — Presenter Notes

VERSION 1.1 | 06 NOVEMBER 2026 | CUSTOMER EXPERIENCE UPDATE

01 — 400 Coffee

A premium, guided customer experience for the café, connected to a disciplined order and payment workflow.

02 — The opportunity

The first interaction should feel like entering the café, while still keeping the ordering journey fast and accessible.

03 — Welcome

The manager welcomes the guest and presents menu ordering or bill payment. The camera entrance is skippable and reduced-motion friendly.

04 — Diary menu

A leather-bound journal provides a distinctive browsing metaphor. All content and prices come from the café's live catalog.

05 — Customization

Variants, add-ons and preparation notes are captured as structured order data, not just decorative text.

06 — Basket

Guest checkout keeps friction low while giving the customer a clear review of items, contact and total.

07 — Payment

Pay-now and pay-at-counter are both supported. The app never treats a static QR or client callback as payment proof.

08 — Operations

The customer side submits to a shared backend. Cashier acceptance and kitchen execution are separate operational states.

09 — Confirmation

The customer sees a reference and accurate status. WhatsApp is an approved provider integration, not a browser-only action.

10 — Platform

The customer layer is built to connect to catalog, payments, notifications and order status services.

11 — Delivery

Build in vertical slices, validate every interaction and measure 3D performance on representative phones.

12 — Next steps

Confirm assets, menu, payment and messaging providers, policies and acceptance criteria before committing final commercials.
