Final Documentation Package & Claude Build Guide

VERSION 1.1 | 06 NOVEMBER 2026

400 COFFEE

Final Documentation Package & Claude Build Guide

VERSION 1.1 | 06 NOVEMBER 2026 | CUSTOMER EXPERIENCE UPDATE

What changed in Version 1.1

The package preserves the earlier SaaS product baseline and adds the approved 400 Coffee Virtual Café customer experience. The customer-side UX is now explicitly immersive, cinematic and diary-led. The restaurant-side POS/KDS/owner interfaces remain separate.

Important status labels

UI images are illustrative concept screens, not production captures. Menu items/prices are sample content and must be replaced by approved café data. Payment, WhatsApp and restaurant sync are integrations, not simulated UI states. No real payment may be marked paid without server verification. Legal documents are draft templates requiring counsel review. Commercial estimates are illustrative and must be re-estimated for the immersive 3D scope.

Recommended build order

Read the master build prompt and implementation spec before changing code.

Inspect the existing repository and report its actual stack, routes, dependencies and tests before implementation.

Build a vertical slice: scene → menu → customize → basket → identity → review → pay-later → confirmation.

Add verified payment adapter and bill lookup only after backend contracts and provider sandbox are available.

Add WhatsApp and restaurant event integration after credentials and contract tests are available.

Run all acceptance tests and fix regressions before calling the build complete.
